EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in telephone interviews with Lisa Mueller on October 9 and 12, 2009.

2. The application has been amended as follows:

In the Claims:

Claim 30 is **canceled**.

Claims 27, 35 and 36 are amended to read as follows:

Art Unit: 1637

Claim 27 shall read:

The method according to claim 26, wherein the overhang is selected from the group consisting of a one-nucleotide overhang, a two-nucleotide overhang, a three-nucleotide overhang, a four-nucleotide overhang, a five-nucleotide overhang, a six-nucleotide overhang and a seven-nucleotide overhang.

In claim 35, line 3 shall read:

generating a four-nucleotide overhang at the 3' or 5' end.

In claim 36, line 3 shall read:

selected from the group consisting of one, two, three, four, five and six nucleotides.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance: in view of the amendments, the claimed invention is novel and unobvious over the cited prior art of Schatz. In particular, no prior art was found that teaches or suggests a method for the manufacture of a nucleic acid molecule comprising providing first and second at least partially double-stranded oligonucleotides, the first of which has a modification allowing the oligonucleotide to be coupled to a surface, with each oligonucleotide comprising a

Art Unit: 1637

single-stranded overhang and a recognition site for a type IIS restriction endonuclease that cuts outside its recognition sequence, ligating the oligonucleotides via their overhangs to produce a first ligation product, wherein the first and second oligonucleotides are not attached to a surface during the ligation, immobilizing the ligation product to a surface and cutting the product with a type IIS restriction endonuclease to release an elongated oligonucleotide with an overhang. The ligation of the oligonucleotides in solution prior to coupling of either oligonucleotide to a surface distinguishes the method from the prior art. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Correspondence

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David C. Thomas whose telephone number is 571-272-3320 and whose fax number is 571-273-3320. The examiner can normally be reached on 5 days, 9-5:30.
